

**HOW TO CONTROL MULTIPLE LED STRIPS  
SIMULTANEOUSLY AS A GROUP**

Once you have successfully added additional devices to your account, you can group your devices together to control them simultaneously as a group.

You will still be able to control each device individually as well but the group allows you to control them at the same time to do the same action.

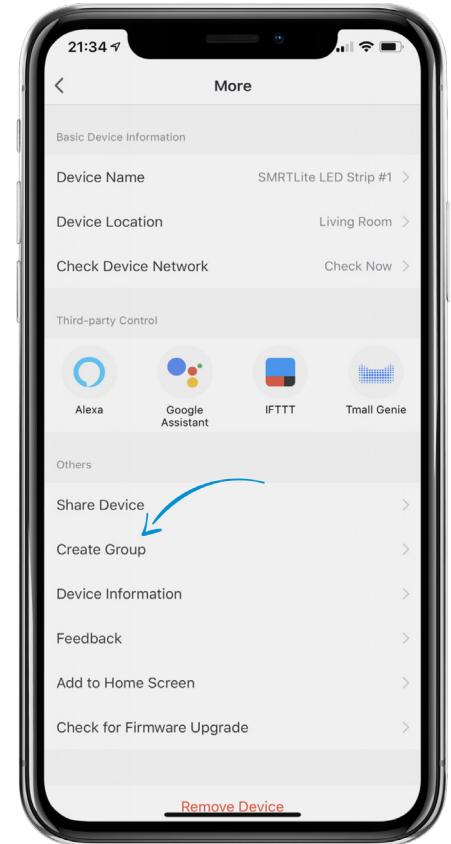

1. To create a group, open the SMRTLite App and select one of the device you want to control.

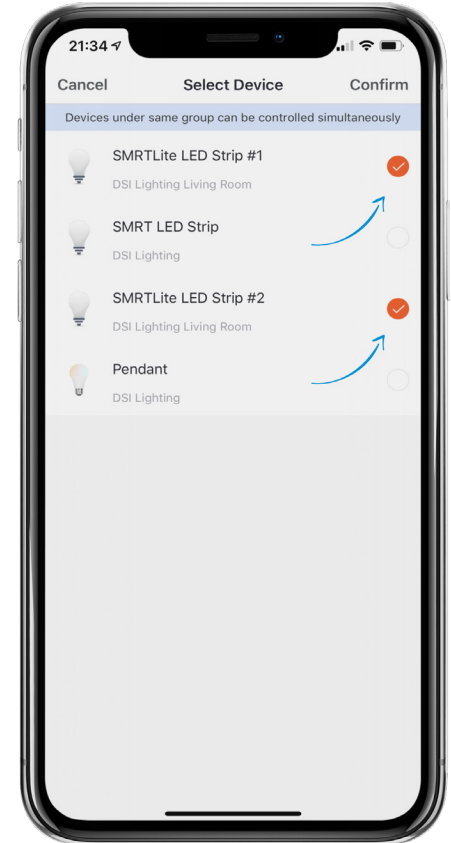

2. Click on the edit pencil on the top right of the screen.

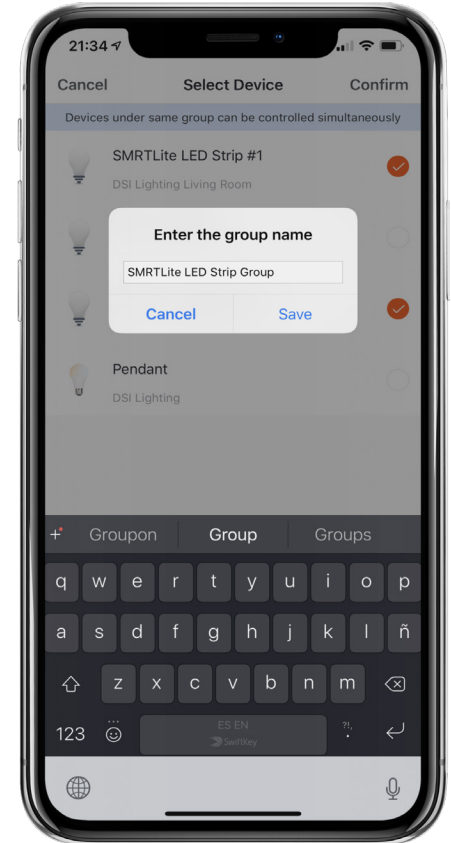

### 3. Select “Create Group”

4. Tap to select the devices you wish to add and operate as one group and press “Confirm” on the top right of the screen.

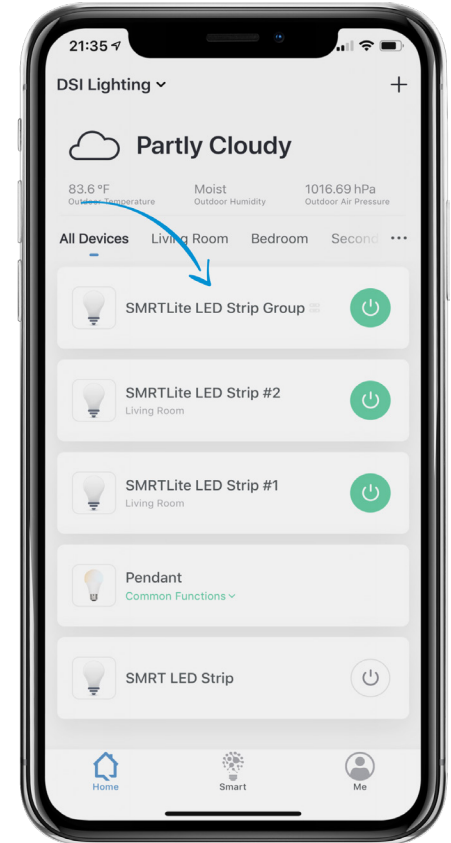

5. You will be prompted to name your group. Once you type the name of the group, press “Save.”

- When you return to the main menu, you will now see your original devices plus the group you just created. To control the devices in your group simultaneously, select the group. To control the devices individually, select the individual devices.

**NOTE:** If your devices are not synced (doing the same thing) after creating the group, turn the group off and on and then select a color and your devices should now be synced (working together).
