

**HOW TO LINK YOUR LED STRIP TO YOUR PHONE**  
**- AP MODE ON iOS DEVICES -**

Before connecting your light fixture to the SMRTLite App, please download the SMRTLite App by searching for **SMRTLite** in the App Store or Google Play Store or by visiting one of the URLs below.

To download app on **iOS** visit: <http://ios.smrtlite.com>

To download app on **Android** visit: <http://android.smrtlite.com>

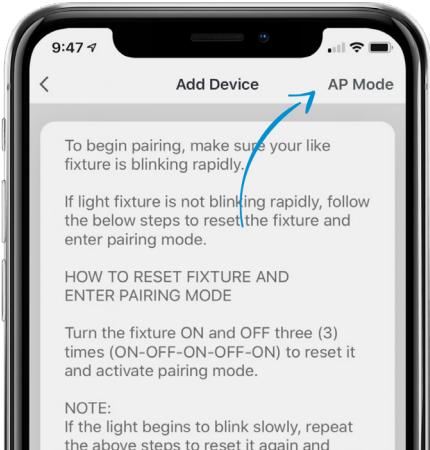

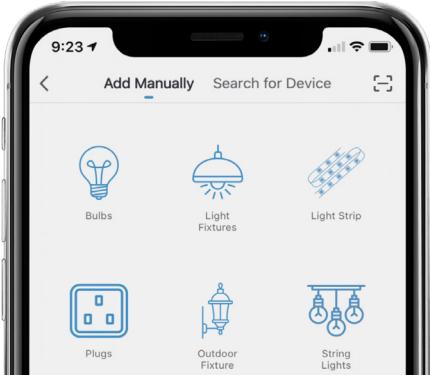

Once you download the app, register for an account and continue to the next steps.

1. After you have installed the SMRTLite app on your phone and registered or logged into your account, you are ready to add and link your lighting fixture to the SMRTLite app on your phone.
2. If your lighting fixture is not installed yet, please install it before trying to set it up. **The lighting fixture must be installed and lit up in order to link.**

AP Mode instructions work best if your phone is already connected to your Home WiFi network before you start this process.

1. When trying to connect via EZ Mode, if you receive a “Connection Failed” pop-up, close it and try AP mode instead.

2. After closing the “Connection Failed” pop-up message, click on Light Fixtures (from the “Add Device” screen) and this time tap the “AP mode” link on the top right of the screen.

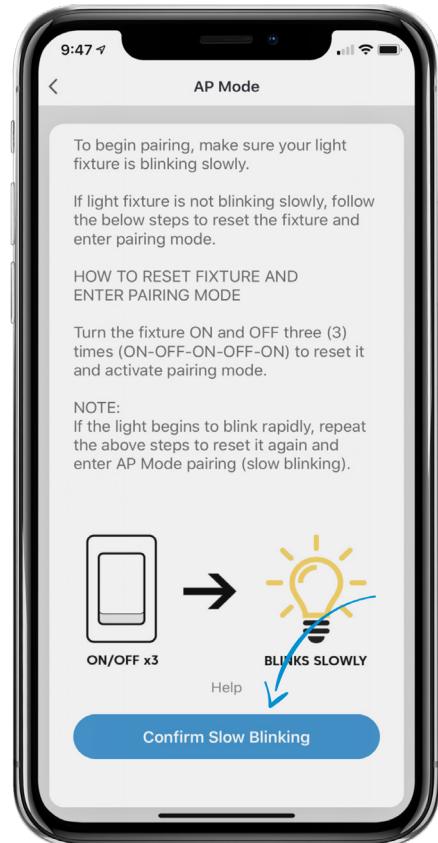

3. To have the light fixture enter AP Mode configuration, toggle the wall light switch on/off three (3) times (ON-OFF-ON-OFF-ON). The light fixture will begin to blink rapidly. Repeat the above steps to enter AP mode where the light fixture will begin to **blink slowly**.

NOTE: If you have a wall switch which has dimming capabilities, you will need to switch it to a regular switch as it will not

4. Once the light fixture is flashing slowly, tap the “Confirm Slow Blinking” button.

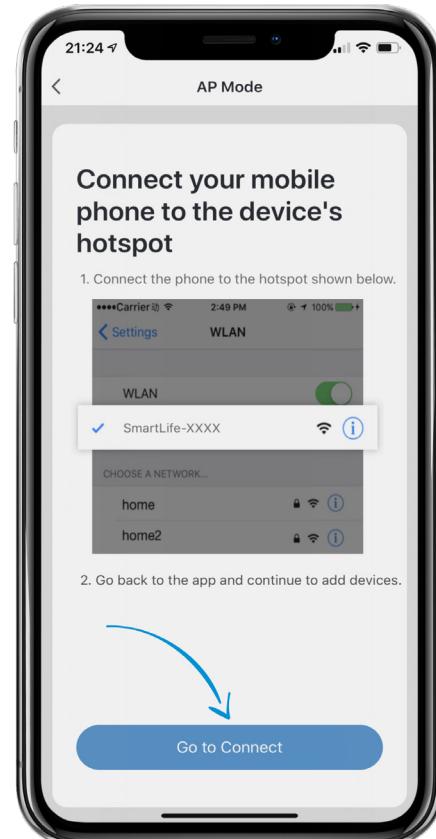

5. Select your WiFi network and enter the network password then tap “Confirm.”

**NOTE: Only secure 2.4GHz WiFi networks are supported. If your WiFi network does not require a password to access it, you will not be able to setup your LED Strip under this type of network.**

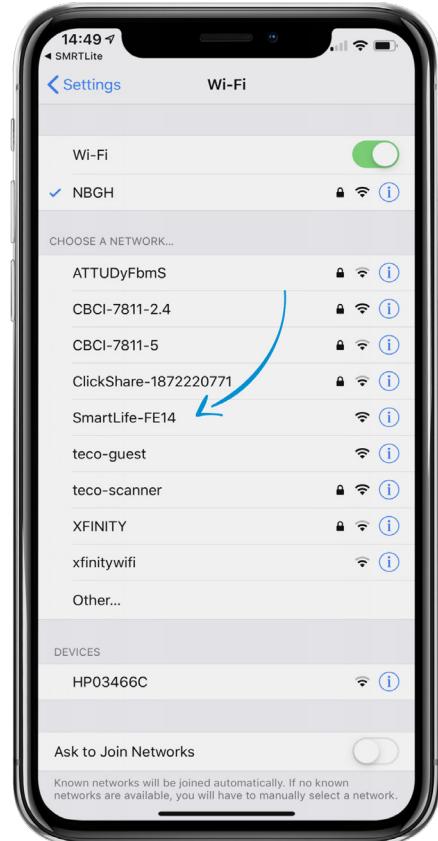

6. Next, a message will say “Connect the phone’s WiFi to the device’s hotspot”, and it will show SmartLife\_XXXX. Click Go To Connect.

You will be redirected to the settings page. Once there, select WiFi to see your WiFi connections.

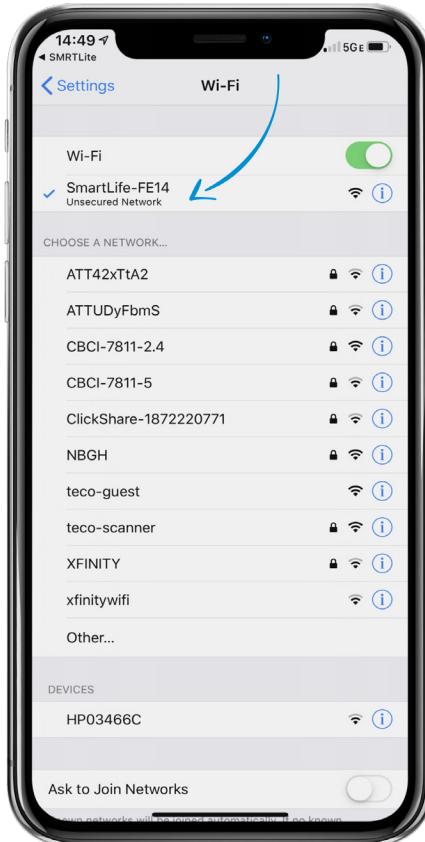

7. You will see available WiFi networks including the WiFi your phone is already connected to as well as a SmartLife\_XXXX option.
8. Click on the SmartLife WiFi under the available networks to connect to SmartLife WiFi.

9. At this stage, your phone will connect to the SmartLife Hot Spot.

**NOTE:** If SmartLife\_XXXX is not an available WiFi connection to choose you must unplug and then plug the LED strip back in and start over again.

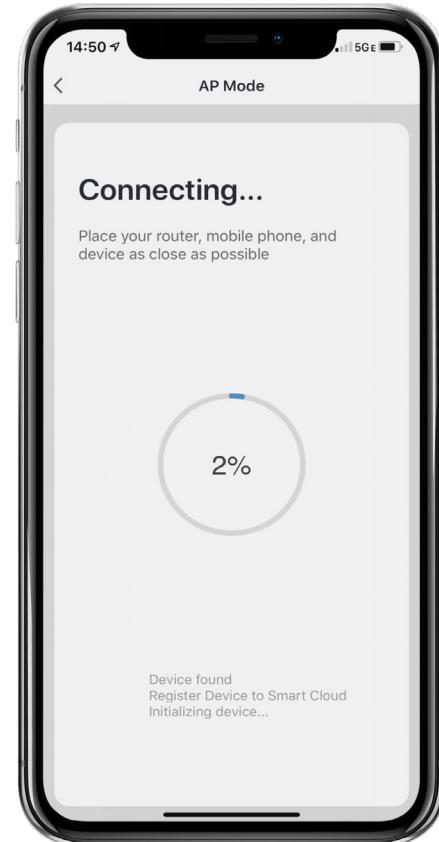

10. Once you are connected to the SmartLife Wifi, press the back button on your phone to be taken to the connection page of the SMRTLite app.

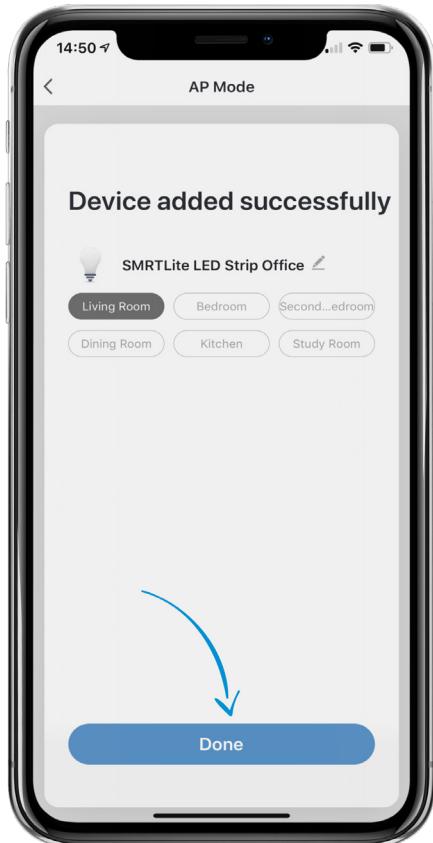

11. Once you see the Connecting screen the connection will begin progressing.

Your light fixture will stop blinking when a connection has been established.

Once the connection reaches 100% then the “Device added successfully” screen appears.

12. Edit the name of your light fixture by tapping the pencil icon and also select the room you would like the device to be assigned to. Then tap “Done.”

**IMPORTANT NOTE:** Configure the light fixture to the SMRTLite app once for the first user, not each additional user. Additional users are accomplished by sharing the device, not re-configuring it.

There is a separate tutorial on sharing. **If you re-configure the device, you will lose your previously saved settings.**

**Congratulations!** Your light fixture has been successfully paired with your device. You may add additional light fixtures to your account by clicking on the + sign to add another device.
